To Read

I advise you touch-sensitive e-ink readers not affiliated with a website selling ebooks.

Even if they are more expensive, they will allow you to read every authors present in my books.

Touch readers or scribblers allow you to write to create what you want for later. Anyone whom can become a scribel can therefore act globally.

There are color e-ink screens that permit to see videos.

A public writer uses scribels to write globally.

Happy reading and writing !

Writing

Write a Short Story then a Novel

Write very creative ideas that artificial intelligence turns into a short story. Then use a free artificial intelligence to turn a very creative scenario into a novel.

Turning Thinking into Alexandrians

The Alexandrian is the most perfect poem's style. But it is very difficult to obtain. It consists about creating 12 syllables' verses, often organized by 4 or by 3. We can even organize Alexandrians in sonnets, that is to say in 4 4 3 3.

Ask artificial intelligence to turn your emotions into a sonnet using metaphors. If you are not satisfied with the metaphors found, improve the sonnet.

Turning a Poem into a Song

If you are writing a poem that allows yourself to understand your emotions, ask to turn this poem into a song.

Invent Future

Later we will live into sea and we will green the deserts thanks to thorium, then fusion. We'll have own flying cars.

Ask the AI to create this world with you own parameters.

Art

Create a Painting

A painting is organized. There are the elements that we see quickly as in the photos. The eyes are drawn to 6 force’s points on the board, then the lines lead to other points.

Ask the artificial intelligence to produce a realistic painting telling it what you want us to see as the best, and what will be partially hidden and visible by lines, and what will have to be discovered by the force's points and lines.

Create a Photo

As for the painting, ask to highlight what you want.

Improvise

Install Muse Score on your computer.

Or get an electronic organ with a USB socket. Connect the USB socket to your PC which can be found at EMMAÜS.

Start improvising knowing where the C and the G are to give an impression of end, the F and the A to give continuity. Record a composition.

Ask an artificial intelligence to improve it.

Create a Movie

Create a movie script. Use the method from Robert McKee and John Truby. Choose famous people as characters, who died more than 70 years ago to have the right to broadcast the film.

Ask the AI to create a storyboard of the scenario. Improve each scene if you are not satisfied. Try to ask what you want in the pictures. Your annoyances allow you to create some cliché.

Ask the AI to create each colorized scene from each board. Modify each scene if you are not satisfied of created reality.

Assemble the scenes yourself.

Science

Write an Experience

If you think yourself having good nature’s conception and you are wondering about it, ask your question to artificial intelligence.

If it answers, try to find a new question with this response. If it doesn't answer your question correctly, rephrase your question so that it can answer it. Then create your experiment to ask the artificial intelligence for result.

Think Scientifically

Make hypothesis and check them. Dialogue and meditate on science according to the rules of the art with engineering you can learn at night.

If artificial intelligence does not satisfy you, titillate it to create a hypothesis yourself. One day your hypotheses will come up with a higher hypothesis or a thought experiment.

If you think you have found something new, spread your find by either trying to patent it. It was then necessary not to broadcast it on the AI. Or while broadcasting you get it public on http://web.archive.org or https://archive.is using your blog mentioning you.
